## DETAILED ACTION

### *Election/Restrictions*

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-19 and 44-50, drawn to a method of manufacturing a phage.

Group II, claim(s) 20-43, drawn to a phage composition.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The claims are directed to a bacteriophage composition and a method of making the bacteriophage composition involving a semi-solid media with a hydrocolloid. However, Montgomery et al. (US 5,714,378) teach the use of a semi-solid media comprising the hydrocolloid of agar for culturing *Pseudomonas chlororaphis* and phage that infect the bacteria. Therefore, no special technical feature exists for groups I-II as defined by PCT Rule 13.2, because it does not define a contribution over the prior art. Note that PCT Rule 13 does not provide for multiple products or

Art Unit: 1648

methods within a single application. Because the technical feature of Groups I-II is not a special technical feature, unity of invention is lacking.
